

TOMS COLLEGE OF ENGINEERING

A VISVESWARAYA GROUP INSTITUTION

7.3.1 Portray the performance of the Institution in one area distinctive to its priority and thrust within 1000 words

TOMS College of Engineering, located in the Kottayam district of Kerala, is on a continuous path of excellence with the goal of being named one of the top ten Best Engineering Colleges in Kerala. It is located 16 kilometers from Kottayam in the heart of a tranquil, greenish lush countryside. The college's unique quality in terms of meeting societal needs, the institute's tradition, and value orientations is clearly defined in the vision and mission statement.

The basic distinction is made with the following

The institute seeks to accomplish this by fostering an environment that is favorable for teaching and learning, providing high-quality instruction through rigorous academic programs, enhancing career opportunities through exposure to industries and cutting-edge technologies, and cultivating professionals with strong moral principles and human values for the benefit of society.

The quality of education has increased with the institute's strengths in the academic, co-curricular, and extracurricular sectors.

The quality of education has increased with the institute's strengths in the academic, co-curricular, and extracurricular sectors.

Pollution Free College

Toms College is situated in a village. Therefore, the atmosphere of the college is quite calm and beautiful. Being in a village, the college is pollution-free.

ADAVANTAGES

Focus on Campus Life

Toms College is also more likely to have a welcoming and close-knit community of students. The majority of students reside on campus, where most activities also take place. This fosters a tight-knit, vibrant campus culture.

Limited Distractions

In a similar vein, picking Toms College will provide you less noise and more peace and quiet. Living in a rural place might give you the environment you need to concentrate on your studies and your

future profession if you believe that living in a major metropolis would keep you from your tests and assignments. When you have almost limitless access to entertainment and nightlife, it's simple to lose sight of the importance of completing your degree. Being a part of a tight-knit campus community with few outside distractions can lead to lower stress levels and greater academic performance.

Functional management

Functional management is another thing that differentiates Tom's College from other institutions. Each department in our organization has its own specialties. However, all departments are connected to each other. All the departments participate together in all the programmes held at the college. There is more to departmental collaboration than merely "cooperating" with other teams. It entails developing a common vision, respect for one another, and a thorough comprehension of each other's responsibilities. The achievement of superior results and exceptional students' experiences is the shared goal of every department.

Aid students in comprehending the limitations and difficulties experienced by teams from other disciplines. Develop a spirit of interest among them so they may learn about one another's projects and even come up with suggestions for how one team might enhance their workflow in order to benefit other teams' productivity. It's critical to promote a culture of mindfulness where department members manage their personal emotions in order to relate to their fellow students in a constructive and effective way.

Strong mentoring system

Another specialty of our organization is a strong mentoring system. Children of all classes are guided by their class teacher. Each child will be accompanied by their own class teacher for anything academic. It makes children more focused on their studies and motivates them to learn.

The specific benefits of being mentored include:

- Being supported and empowered in students personal growth;
- Being assisted in identifying and achieving career goals;
- Being assisted in identifying and filling knowledge and skill gaps in general areas;
- Seeing an increase in confidence.
- Acquiring and retaining a wider view on available job possibilities and career options.
- Having a senior role model available.
- Learning about university culture.
- Building coaching and mentoring abilities.
- Increasing academic performance by developing staff.

- Enhancing communication between people, groups, and units.
- Reaffirming your faculty's dedication to learning and growth.
- Establishing a fertile environment for new concepts and breakthroughs.

Arrangement of study time

Similarly, the arrangement of study time for boys and girls in the college hostel also makes this institution different from other institutions. Study time for children is from 6 p.m. to 11 p.m. In between, one hour is taken for dinner. A systematic study method like this helps the students learn more.

Brings Routine into Students Life: According to the study, consistent daily routines may help to enhance time management skills and, in turn, lessen the experience of attention challenges in adulthood, despite the fact that it is still only preliminary.

Saves Time: The fact that a timeline saves time is another factor in its importance. It avoids time wastage. A timetable encourages pupils to focus on one subject at a time since it gives specific activities to be finished within a set amount of time. Students have been shown to benefit from having good time management skills.

Energy Saver: The fact that it saves time is another factor in the importance of a timeline. It stops time from being wasted. A timetable allows pupils to focus on only one work for that period of time since certain activities are assigned to be finished within a certain amount of time. It has been observed that pupils benefit from having good time management abilities.

Time Management: The fact that a timetable allots time in accordance with the demands of the task is one of its benefits for pupils. The tough subject can get more time, whereas the simpler subject can get less time. In this manner, the time has been allocated based on the difficulty of the task at hand.

De-Stressing: Making a study schedule can also help you relax. When you create a schedule, you allocate time to various subjects. The schedule outlines your tasks and the required amount of time for them. Knowing what you have to do each day will enable you to plan ahead, avoid last-minute studying, and lessen the stress of cramming for exams. Greater grades and more time for extracurricular activities are both directly correlated with less stressful study strategies.

Revision classes

At the end of all modules, students are given revision classes in all subjects. Along with that, exams are also conducted for the students. This helps the children to clearly learn the things that they found difficult to learn when the classes were taken away.

Revision classes are for re-engaging with previously learnt material to keep it current in memory. When learning for a specific goal, like studying for an exam or assessment, they're especially helpful. They can also be useful for generally recalling information. For instance, when we need to learn a new system or procedure or when we wish to recall people's names. Depending on how important the material is and how challenging it is to learn, we will select one or more review techniques from the area below. As a student, we must also consider we own abilities and preferences in order to develop the most effective strategy.

Message to parent's mobile number

Another unique feature of Tom's College is that a message is sent to the mobile number of the parents of the absent children, informing them that the children are absent. Also, the children who are absent are called by the respective class teachers to inform their parents why the child is not coming to class and the child's attendance so far.

Parent Involvement Leads to Reduced Absenteeism

Social abilities including self-efficacy, social awareness, self-management, and a growth mentality are hampered by it. Academic achievement suffers as a result of absence. Studies have shown that pupils' academic performance declines when they miss classes. Student dropout may result from it. Dropouts experience long-term effects include unemployment, low income, and an increased likelihood of being a victim of crime.

Touch with the parents

The college is in touch with the parents of every student studying at our college. More than just a PTA meeting, every teacher cares about their parents as much as their students. After this, every parent can know every aspect of their child's academic performance. Therefore, every parent is involved in the growth of this college. Teachers will be better able to decide how and what to teach their students if they are aware of who they are. Teachers gather details about each child's interests, learning preferences, and requirements through communication with parents in order to effectively reach those kids.

Motivating Mindset:

In order to mould young minds to create the appropriate attitude, it is essential to foster the right attitude among learners. Learners are exposed to numerous guest lectures from notable

academics, business leaders, and well-known alumni. Inspirational speeches by well-known individuals support worldwide outreach and develop young brains. In order to close the knowledge gap between the curriculum and the workplace, industrial tours are planned for students. Learners are encouraged to take part in both indoor and outdoor sports to develop a healthy sense of competition and to keep themselves physically fit.
